

This is the Maths work for Hedgehog and Squirrel class this week:

The children need to be able to name most of these shapes and talk about how many faces and corners they have. Can they compare the cube and the cuboid what is the same and what is different about them? Which shapes roll?

Some practical ideas to learn about 3D shapes:

Can you find these shapes around your home, in your garden or maybe on a walk?

Can you make a junk model using some of these shapes. Which shapes work best for your model why is that?

If you have some modelling dough can you make the shapes?

Which shapes do you think would be good to build a tower with?

Have fun learning about 3D shapes here are some songs to help:
